

# ENVIROSTALL

Our ground-breaking research has resulted in a new beginning in green technology. Envirostall is the first and only patented stall-cleaning system capable of making your horse stalls more sanitary while reducing environmental issues in the equine industry.

## **A Veterinarian's View: Tom Lurito, DVM**

"Envirostall will allow your horse to be comfortable and healthier while improving the soundness and longevity of your horse."

## **A Customer's View: Anissa and Jason**

"Envirostall has eliminated the moisture and odor from our stalls. It takes less time to clean the stalls, we spend less than half of our previous costs on bedding, and we have reduced the need for labor to maintain the stalls." He also noted, "After five years, our stalls are still level."

ENVIROSTALL

# ENVIROSTALL

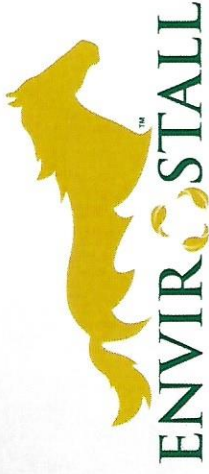

Next-Level Living for Horses

A patented environmental preservation system that uses bioremediation to clean and neutralize horse urine, remove contaminants from horse stalls, and protect the environment from agricultural run-off from horse farms.

The gold standard for green technology in the equine industry.

Next-Level Living for Horses

## The Envirostall System

Envirostall, a U.S. patented environmental preservation system, uses bioremediation to remove contaminants from horse stalls.

Envirostall's multi-layered system collects horse urine and other impurities, neutralizes them using our EPA-approved microbes designed specifically for equine applications, and then disseminates safe water back into the soil.

## The Benefits of Envirostall

- Significantly reduces bedding, labor, waste disposal, and veterinary costs.
- Helps eliminate contaminants and odors that lead to hoof and respiratory problems.
- Mitigates bacteria, viruses, mold and mildew.
- Helps rid your stalls of rodents and the problems they cause.
- Envirofilter and anti-fatigue matting provide a level surface, greatly reducing stress on your horse's joints and the potential for hock sores.
- Allows you to spend more time enjoying your horse instead of working for them.

## How it Works

Envirostall absorbs horse urine through our Envirofilter, a one-piece layer of geotextile material. The urine is stored in a layer of Envirolyte, a stone aggregate capable of absorbing 120 percent of its weight in urine. Our EPA-approved, proprietary microbes are released into the Envirolyte where millions of these microbes digest the impurities changing them into water and harmless gases.

The water then flows back into the soil as clean water. As long as you keep a horse in the stall, these tiny microbes will be working to neutralize impurities from your horse's urine. Envirostall continually cleans and purifies your stall by greatly reducing toxins. Envirostall keeps your horse healthy while saving you money.

## Envirostall: Saving Our Environment

By removing the impurities from horse urine before it enters the ecosystem, Envirostall prevents nitrogen, phosphates and carbon from being released into the environment. The system minimizes hydrocarbon gases, controls odor, and prevents pollution from organic food waste, including antibiotics, chemicals and pathogens that enter the soil through untreated dissemination of horse urine.
