

How it Works

EnviroStall is a U.S Patented Environmental Preservation System that uses bioremediation techniques to clean and neutralize urine and helps remove contaminants from horse stalls.

Bioremediation uses ecologically safe micro-organisms to degrade harmful contaminants and turn them into environmentally safe by-products.

The microbes in EnviroStall are specifically formulated for use in the equine industry. They are EPA approved and ready for use requiring no special solutions, no special mixing and no waiting period before application. The simple addition of urine activates our product. These factors translate into cost savings for you.

Once the EnviroStall microbes are injected in your stalls, they go to work digesting toxins and changing them into safe water and harmless gases. The microbes will thrive and multiply in your stalls as long as there is a horse in the stall.

With EnviroStall, your stalls are virtually pristine reducing the health risks to your horses and you.

You can have confidence in knowing that your stable is the healthiest environment possible when you have EnviroStall.

ENVIROSTALL™

A subsidiary of Crosswater

A 1000-pound horse produces up to 50 pounds of wet manure each day or nearly 10 tons of manure each year. Horse owners have long sought ways to eliminate manure in an eco-friendly manner.

Our team has engaged in ground-breaking research resulting in this patented system. EnviroStall is a new beginning in green technology as the first and only full-service system capable of dealing with and reducing environmental issues in the equine industry.

EnviroStall is a multi-layered system that collects horse urine and other contaminants, helps neutralizes them, and then disseminates safe water back into the soil.

for Horses**

Our Approach

The United States Geological Survey, defines safe water as, “water that will not harm you if you come in contact with it.”

Using EnviroStall™ helps eliminate the contaminants that harm your horses, people and the environment.

Benefits to Horses

- Helps to eliminate contaminants that cause thrush, respiratory problems and other health issues caused by contaminated stalls.
- Helps reduce fatigue on horse shoulders and legs.
- Eliminates odor naturally.
- Provides a level surface for the horse.

Benefits to People

- Significantly reduces the cost of horse ownership and veterinary services.
- Reduces bedding, waste disposal and labor clean-up costs.
- Allows you to spend more time enjoying your horse.
- 100 percent tax deductible.

Benefits to the Environment

- Generated through sustainable and recycled materials.
- Neutralizes urine contaminants from horse stalls.
- Reduces contaminated materials to safe water.
- Meets EPA ground water protocols.

Our Solution

Bedding: Top off your Envirostall with the bedding of your choice to provide your horse with the healthiest, most comfortable stall possible.

Porous Top Skin: We add a thin film over the rubber mat before adding bedding allowing urine and other contaminants to drain into the EnviroStall systems.

Cushioned Mat: A one-half inch mat is laid over the top of the storage aggregate. This reduces compression pressure on your horse’s joints by up to 50 percent.

Storage Aggregate: We incorporate a high-porosity, natural material to store horse waste. Then, we inject our EPA-approved bioremediation microbes into the storage aggregate and they get to work cleaning and neutralizing contaminants.

Native Soil: The first step in the EnviroStall system is to prepare the stall for acceptance of safe water back into the soil by leveling the soil.
